

Appendix B. Time series plots of ANN and observed EC values (Approach 2 ANN)

This appendix presents time series plots of EC for each station. The stations are organized in order of increasing distance from Golden Gate Bridge. On each page, observed EC data are shown, whether from the Bulletin 23 sources or from CDEC, and corresponding ANN estimates are also shown, using the Approach 2 ANN for either the Sacramento or San Joaquin River branch. In many cases, even for the same station name, the actual distance from Golden Gate may be different for the Bulletin 23 and CDEC sources. In these instances, the ANN prediction is based on the distance corresponding to the observation shown. In cases where both data sources are present, for the proper comparison, the ANN function is called twice with the two corresponding distances. Thus, on a given page, the different lines shown for the ANNs are all based on the same ANN, and differ only in the distance used.
