

FIND AND BROWSE EXISTING PROJECTS

In this tutorial, you will learn how to browse existing projects using the built-in search function.

First, always be sure you are logged in by using the "Log In" or "Sign Up" buttons at the top of the screen.

Once you are logged in, you can access the project library in two ways. You can click on the Ecosystem Projects icon on the homepage:

The project library opens up to the "What's New" tab, where you can browse the latest project updates and uploads.

You can also browse projects by region, using the map. Use your mouse cursor to grab and move the map. The flags represent the various project pages. By hovering over each one, you can find out more information.

The map function is a good way to view all the public projects that are in a specific region. The Yolo Bypass is one example.

If you hover over each public project in the Yolo Bypass, a box will appear. Click the "MORE" button to go to that project page.

There are several options here that allow you to make a more advanced search. However, the only required field is the "Search" box.

Let's go over the options.

The **Data Source drop-down menu** option helps you narrow down your search by choosing a specific source.

Search and Filt	er

Let's do an example search.

Let's search for all projects that contain "smelt" as a keyword by typing "smelt" in the search box.

	Use of state space population dynamics models in hypothesis testing: advantages over simple log linear regressions for modeling survival, illustrated with application to longfin smelt (Spirinchus thaleichthys)	Pelagic Organism Decline [P] Mar 18. 2014 01-49 PM View Project	2012 to 2013 Smelt Migration Season: Turbidity Observations [P] Apr 17, 2013 04:26 PM View Project	Spring Kodiak Trawl [P] Feb 12, 2013 11:29 AM View Project

If we want to be more specific and only include projects under the "research" type, choose "research" from the Type drop-down menu.

The results will automatically adjust.
