INCIDENT ACTION PLAN

1. SITUATIONAL AWARENESS

Special Flood Considerations see back for all special flood considerations
A122 - Access Following Failure of King Island Levees
Should King Island's levees fail, access to Empire Tract shall take place by diverting traffic from Eight Mile Road at the Bishop Cut Bridge on to the south levee crown on King Island to the Honker Cut Bridge.
A123 - Ferry Access Points
There are 3 ferry access points located on Empire Tract and can be used in an emergency to offload materials and equipment. The access points are located near stations 104, 324 and 388.
A124 - Reclamation District No. 2029
Superintendent John Rocha coordinates patrol schedules and sectors upon high water alerts. Patrol meets at district headquarters shown. District anticipates having enough personnel to maintain extended patrol.
A125 - Reclamation District No. 2044
Nick Marchetti coordinates patrol schedules and sectors upon high water alerts. Patrol members meet at district headquarters shown. District anticipates having enough personnel to maintain extended patrol.
A127 - Bishop Tract Pumping Stations
District maintains three pumping stations as shown on map. No station is above 100-year flood levels.
A129 - Ridge Tract Power
Two separate P.G.&E. lines run into Ridge Tract from the north and the south as shown on map. Switch mounted on telephone pole on northern end of island allows power to island to be switch from one source to the other.
A133 - Pumping Stations

2. ESTABLISH PLAN/STRATEGY

Flood Contingency Options see back for all flood contingency options
B32 - RD 2033 - Brack Tract, Failure of private levees on south bank of Mokelumne River east of district
The primary flood fight strategy will be to prevent movement of floodwaters into district from East.
Actions
1. Extend Brack Tract Dryland Levee and hold floodwaters at this point and install pumps to move floodwaters into Hog Slough.
B33 - RD 2033 - Brack Tract, Failure of Primary Levee
The primary flood fight strategy will be to prevent movement of floodwaters east of Interstate 5 or south into Terminous Tract from and of Sycamore Slough.
Actions
1. Repair levee breach
2. Evaluate potential extend of movement of floodwaters to East and potential depths and prepare plans for emergency berms at Interstate 5 underpass or extending East from Sycamore Slough if warranted
3. Place visquine on inside of primary levees where exposed to wave action to reduce damage to interior of levees
4. Place additional pumps at district pumping station for dewatering operations
B34 - RD 2033 - Brack Tract, Highwater Event

The primary flood fight strategy is to patrol primary levees, ensure pumping stations remain operational, and monitor Camanche Reservoir situation for any threat of overland flow from the East
Actions
1. Organize Patrols and Notification system
2. Designate District official to attend North Delta Flood Fight Unified Command meetings.
B42 - RD 548 - Terminous Tract, Failure of Shin Kee Tract Levees
The general floodfight strategy will be to raise and hold Upland Dryland Levee on east side of district facing Shin Kee tract to prevent flooding of district and possibly make Shin Kee Relief Cut if water elevations in the White Slough are below elevation of impounded waters.
Actions
1. Raise Upland Dryland Levee from White Slough to South end of Upland Canal
2. Establish patrol and response plan for dryland levee.
B43 - RD 548 - Terminous Tract, Highwater Event
The General floodfight strategy will be to maintain primary district levees.
Actions

1. Establish levee patrol in accordance with patrol plan
2. Participate in North Delta Flood Fight Unified Command with command post at Van Exel Dairy
B47 - RD 548 - Terminous Tract, Failure of Primary Levees
The general floodfight strategy will be to prevent movement of flood waters east of Upland Dryland Levee, repair break, preserves primary levees, and position additional pumping capacity to dewater district.
Actions
1. Repair break and lay visquine to protect interior slopes of primary levees.
2. Perform analysis of probable eastern extension of floodwaters toward Interstate 5 and, if warranted, prepare to flood fight upland Dryland Levee to prevent further eastward movement of flood waters toward Interstate 5.
3. Move generator to Pumping Station #1 for use with existing pumps and install additional pumping capacity to dewater district. Movement of personnel and equipment to dewatering site will have to be by water or air. If failure is on North levee from East end of Sycamore Slough to Pumping Station #1 on the Mokelumne River.
B48 - RD 756 - Bouldin Island, High Water Event
The general floodfight strategy will be to patrol and maintain primary levees
Actions
1. Initiate and coordinate patrol of primary levees and report and respond to identified

3. INITIATE PLAN
